The Batch Script Processor software allows users to easily run any AutoCAD script file on multiple AutoCAD drawing files or DXF files. Features include a Script File Editor to edit or create script files inside AutoCAD, an Auto Capture mode that captures keystrokes as you work in AutoCAD and generates a script file on the fly. The use of File Groups is supported allowing the user to save a group of files for Batch processing. A time-out feature automatically aborts a script if the script "times out" as defined by the user. Files and groups can be selected across drives and directories and there is also an option to recursively search subdirectories for your file specification.

Features

Crash Recovery! If your script crashes AutoCAD, Batch Script will restart AutoCAD and continue where it left off!

Script Step-Thru: Check the results of your script line by line in AutoCAD. Quickly find errors in your script!

Enhanced script editor with syntax highlighting. Great for catching extra spaces, carriage returns, etc.

Drag-n-drop to create custom sort orders for file processing.

Recursively search directories.

Quick Script Access: Have your own library of commonly used scripts available for quick access.

View logs for the entire process, or individual files.

Save and Load commonly used groups of drawings for processing.

Displayed status of all files: Error, Done, ToDo, etc.

Capture the script directly from the AutoCAD command line.

Automatically abort drawing if the scripts takes too long.
